

TORQUE LIMITERS - CLUTCHES

Up to 30.000 Nm of torque and 140 mm bores

(SAFETY COUPLINGS)

ComIntec[®]
Technology for Safety

TORQUE LIMITERS (SAFETY COUPLINGS) - CLUTCHES: introduction

ComInTec **torque limiters** (safety couplings) and **clutches** are mechanical components necessary to fit along the kinematic chain and are preferred to electronic safety devices because of a better response time, improved reliability, excellent configuration flexibility, easy fitting and adjustment, use at high speeds in hard environments in the presence of inertias and important masses. In fact the electronic systems, which normally act up to the transmission, present: delayed reaction time, many factors as a source of error, configuration and management complexity. The fitting of the mechanical torque limiters along the kinematic chain is therefore necessary for a reliable and complete protection, in order to improve the level of safety and the machine, according to the new EN ISO 13489-1 standards, reducing the average possible broken-down and unproductive downtime.

Benefit of our models:

- Long product life with continuous reliability.
- Optimum protection against environmental conditions.
- Simple mounting for in-line and parallel transmission.
- Easy setting and adjustment.
- Highly accurate and fast machine protection.
- Special designs to suit specific applications possible.
- Competitive pricing without sacrificing quality.
- "Made in Italy" with certified quality.

Our main product lines:

- **Friction lines:** simple, economical, with sliding function suitable for use in dry and dusty environments .
- **disengage lines:** high stability during transmission with instant disengagement and the possibility of free rotation.
- **Axial lines:** Suitable for limiting compression and tension forces on crank mechanisms.
- **Pneumatic clutch lines:** function of the clutch- disengagement with the possibility of variation of the torque during the motion.

FRICITION TORQUE LIMITER "DF"

Sliding Safety coupling where the transmission component is fitted between two friction rings and slides when the calibrated torque is reached. The minimum required to have a low cost protection.

Torque max 23000 Nm - Max bore ø140 mm.

1

ECONOMIC BALLS TORQUE LIMITER "EDF"

Safety coupling with simple and compact balls inserted directly in the drive element of transmission. The disengagement occurs quickly and safely if the calibrated torque is exceeded.

Torque max 1450 Nm - Max bore ø55 mm.

17

ROLLERS TORQUE LIMITER "DSR"

A Roller safety coupling that allows a complete disengagement when the calibrated torque is reached. Suitable for transmitting high torque with high reliability and small size.

Torque max 12000 Nm - Max bore ø120 mm.

27

BACKLASH FREE TORQUE LIMITER "DSS/SG"

Ball safety coupling with high technology and backlash free transmission. Device with high sensitivity of intervention, instant and precise disconnection.

Torque max 1200 Nm - Max bore ø65 mm.

37

FREE ROTATION TORQUE LIMITER "DSS/SG/RF"

Backlash free Safety coupling suitable for high speeds, with free rotation without residual torque after disengagement that occurs precisely and immediately. The re-engagement is manual.

Torque max 1200 Nm - Max bore ø65 mm.

43

MODULAR TORQUE LIMITER "DSM"

Modular Safety coupling, robust, suitable for "heavy industries" even at high speeds. After disconnection there is free rotation without residual torque, re-engagement is simple and manual.

Torque max 9000 Nm - Max bore ø140 mm.

49

TORQUE LIMITER FOR REDUCERS "PR"

Safety coupling to be mounted between the motor and gear unit thus reducing significantly the size of the device at the same power output.

Available in both slip release versions.

Torque max 2600 Nm - Max bore ø55 mm.

55

AXIAL FORCE LIMITER "DSA"

Safety coupling with linear limitation of force. The axial disengagement can take place in both compression and tension once the calibrated force is reached, the re-engagement is automatic.

Force max 4700 N - Max shaft ø20 mm.

61

PNEUMATIC CLUTCHES "AP"

Clutch or roller with torque control during motion and low residual torque after disengagement.

Ability to disconnect the driven portion from the driving through pneumatic control.

Torque max 30000 Nm - Max bore ø120 mm.

65

TORQUE LIMITERS (SAFETY COUPLINGS) - CLUTCHES: hub connection type on couplings application

Type **A** Plain bored H7 hub with set screw.

An economic and quick solution for low torque.

Type **A1** H7 bore with keyway and set screw.

Standard solution on the hubs shown in the catalogue for horizontal assembling.

Type **A2** Splined bore with set screw.

Recommended solution in the case of hard transmission.

Type **B** Single split clamp hub with plain H7 bore.

Reduction of angular backlash without change to the overall dimensions.

Type **B1** Single split clamp hub with H7 bore and keyway.

Reduction of angular backlash, during reversing drives, and high torques.

Type **B2** Single split clamp hub with splined bore.

Reduction of angular backlash in the case of hard transmission.

Type **C** Two piece clamp hub with plain H7 bore.

Reduction of angular backlash, and simple radial assembly/disassembly.

Type **C1** Two piece clamp hub with H7 bore and keyway.

Simple assembly and reduction angular backlash, even with high torque.

Type **G** Clamp connection with internal Taper Bush.

Flexibility of fitting for conical bushing without angular backlash.

Type **D** Clamp connection with integrated locking assembly.

Suitable for high speeds without change to standard dimensions (.../CCE version).

Type **E** Clamp connection with internal locking assembly.

Reduction of angular backlash and reduced radial dimensions.

Type **F** Clamp connection with external locking assembly.

Fast and economic solution to transmit low torque.

Bore and Keyways according to UNI 6604 (DIN 6885-1)

FRICTION TORQUE LIMITER

(SAFETY COUPLINGS)

Up to 23.000 Nm of torque and 140 mm bore

DF

ComInTec[®]
Technology for Safety

DF - friction torque limiter: introduction

- ⊙ Simple and economic friction torque limiter.
 - ⊙ Suitable for dusty conditions without need of timing between gearbox and output.
 - ⊙ Silent overload without vibration.
 - ⊙ Protection in both rotation directions.
 - ⊙ Asbestos-free friction discs.
 - ⊙ Simple and precise torque setting by adjusting the locking ring.
 - ⊙ Innovative calibration system by "H dimension" for an immediate calibration of the device.
- ON REQUEST
- ⊙ Complete with transmission gear, fully turned and mounted (plate wheel, pulley, gear pair).
 - ⊙ Different types of friction discs for specific applications.
 - ⊙ Possibility of connections with bore and keyway, locking assembly or other locking systems.
 - ⊙ Anti-corrosive surface treatments for special requirements.

Sliding safety coupling where a plate wheel, pulley or other transmission component is interposed between two friction rings. Upon reaching the torque sliding ensures continuity in the transmission without damaging the components. The minimum to have a low cost protection.

MAIN APPLICATIONS

- ⊙ Forming machines.
- ⊙ Conveyors.
- ⊙ Automotive.
- ⊙ Agricultural machines, woodworking machines.

ADVANTAGES AND BENEFITS

- ⊙ Protects the motor-gearbox in case of accidental collision.
- ⊙ Protects the film of wrapping machines in case of higher tension.
- ⊙ Absorbs static torques without disengaging.
- ⊙ Protects the gear in case of short product jam.

FRICITION RINGS

- ⊙ STD (standard): friction rings used for the torque values indicated in the catalogue. Optimum performance ratio torque / life.
 - ▲ ⊙ LD (long life): same performance in torque respect std friction rings life greater than 5 times.
 - ▲ ⊙ LDX (extra long life): life greater than 150 times respect standard friction rings, but performance in torque reduced by of 70%.
- ▲ On request

	DF: Basic model for parallel shaft transmission, with plate wheels, gear pairs or pulleys.	From 1 to 23000 Nm 140 mm max bore	Page 9
	DF/SI: signaling on overload and automatic re-engaging possible.	From 3 to 23000 Nm 140 mm max bore	Page 10
	DF/TAC: in-line shaft connection, simple and economic.	From 1 to 23000 Nm 160 mm max bore	Page 11
	... + GAS: in-lineshaft connection with elastic coupling with high misalignments.	From 1 to 9600 Nm 125 mm max bore	Page 12
	... + GEC: in-line shaft connection with compact elastic coupling.	From 1 to 23000 Nm 160 mm max bore	Page 12

APPLICATION EXAMPLES

DF - friction torque limiter: technical data

- Simple and compact solution.
- Version with coil springs for fine adjustment: .../CM.
- Available in corrosion resistant: DF/EA.
- Available with customized alignments ("L") interchangeable with other models on the market.
- Available with radial ring statically balanced: .../GR.
- Torque range from 1 to 23.000 Nm; max. bore \varnothing 140 mm.

NOTES

- P *: On the size 00.25 the grub screw is located on the nut side, not on the flange side.
- Weights are relevant to the torque limiter with pilot bore (DF), inertias refer to the maximum diameter for finished bore.

.../SI - intervention signaling version: technical data

- ⊙ Electromechanical overload signaling.
- ⊙ Automatic re-engaging after transmission reset.
- ⊙ Assembly with helical springs possible: .../SI/CM.
- ⊙ Available with a longer shaft for assembly with transmission elements of large size: .../SI/ML.
- ⊙ Available with friction rings with different performances for specific needs.
- ⊙ Torque range: 3 – 23.000 Nm; max. bore: $\varnothing 140$ mm.

DF - friction torque limiter: additional information

OTHER COUPLING ON REQUEST

Model **DF** suitable for connections **GF** to coaxial shafts capable of recovering high misalignments.

VERSIONS ON REQUEST

.../CM: minimum torque version

Helical springs execution, for a wider torque range and consequently a finer adjustment on calibration is possible.

Size	Torque [Nm]		A	M1
	spring ST	spring SQ		
0.50	1,5 - 9	-	50	57,5
1.70	2 - 34	2 - 60	70	85
2.90	5 - 56	3 - 70	90	95
3.115	10 - 130	25 - 160	115	113

.../EA: rust resistant

Rust resistant execution, with stainless steel rings, galvanized for application in wet environments.

.../GR: model with radial ring

Ring with radial locking statically balanced alternative to the grooved nut GT standard. Available from size 00.38 to 5.170.

GT/DR KIT: kit for double registration matching to the nut with notches GT

Torque adjustment system with double registration (with flange and hex head screws) for high sensitivity and precision calibration, also with belleville washers.

DF - friction torque limiter: additional information

PLATE WHEELS

The driving part selected (plate wheels, pulleys, gears, and so on) to be incorporated into the friction torque limiter, must adhere to predetermined characteristics (ex. the surface in contact to the friction rings with roughness $Ra=0,8 : 1,6$) to ensure good performance. In the table below, there are standard plate wheels in ComInTec's production (supplied already grounded) which can be assembled on the torque limiter; and the minimum chain passage "V" (see picture 3), necessary for the correct sizing of the plate wheel to avoid contact between the chain and outside diameter of the limiter. It is possible to assemble various types of plate wheels, but the surfaces must be machined, and the chain passage cannot be smaller than this value. Another aspect to take into consideration to ensure the dimension of the assembly is correct, is the element thickness and its relevant bush "N" (see picture 1). We suggest to obtain a quote "N" equal to $[S + G + 1]$. Comparing "N" value obtained, to the N_{std} indicated on the table, which corresponds to the standard length of the bushes, you can have: "N" < " N_{std} " (picture 1 - ex.A) → reduce the bush width to quote "N". "N" > " N_{std} " (picture 2 - ex.B) → machine the driving part at a diameter of "A+1" and a depth equal to "x" ($N - N_{std}$).

Example "A" (see picture 1)
 1.70 with plate wheel #7
 $G = 7 \text{ mm}$
 $S = 4 \text{ mm}$
 $N = S+G+1 = 4 + 7 + 1 = 12$
 $N_{std} = 15$
 Reduce the bush width to 12 mm.

Example "B" (see picture 2)
 1.70 with plate wheel #13
 $G = 13 \text{ mm}$
 $S = 4 \text{ mm}$
 $N = S+G+1 = 4 + 13 + 1 = 18$
 $N_{std} = 15$
 Machine $\phi 71$ with depth (value "x" = $18-15 = 3$)

where:

- p = pitch [in]
- G = thickness of the ground element
- z = teeth number
- dp = pitch diameter
- S = thickness of the friction ring
- N_{std} = thickness of the standard bush
- N = thickness of the calculated bush (S+G+1)
- A = outside diameter of the torque limiter
- V = inside diameter of the chain
- x = depth of the machining ($N - N_{std}$)

DF - friction torque limiter: additional information

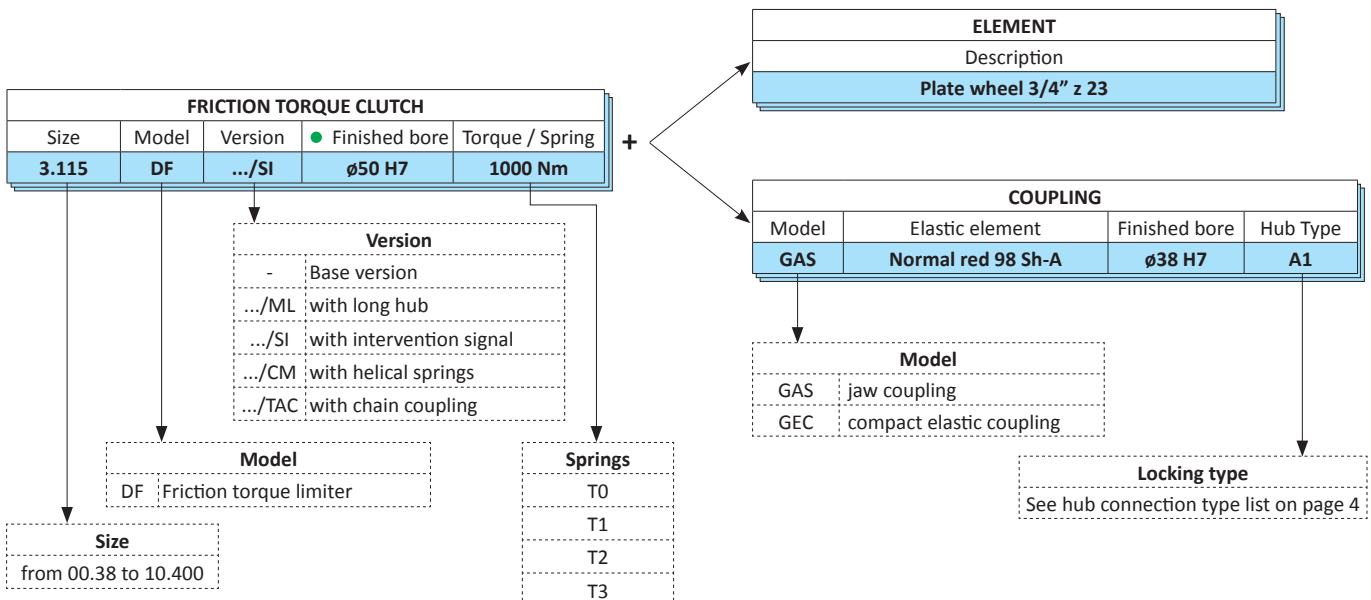

SENSOR CONNECTION EXAMPLE

To maximize the lifetime of the friction rings and maintain the performance of the limiter, you should promptly stop the drive as soon as the first slip occurs. This is possible using the model DF / SI combined with a micro-switch (model EM1 or EM2) or an inductive sensor (model PRX), see page 73.

If this is not possible, however, we suggest the use of an inductive sensor connected to a tachometer or frequency inverter in order to reveal the possible speed change of a metallic mass connected to the organ of transmission, as shown in the example below.

ORDER EXAMPLE

- If the version of DF/TAC state both finished bores (on the limiter and pinion TAC).

ECONOMIC BALL TORQUE LIMITER

(SAFETY COUPLINGS)

Up to 1.450 Nm of torque and 55 mm bore

EDF

ComInTec[®]
Technology for Safety

EDF/F - economic ball torque limiter: introduction

- ⦿ Reduced torsional backlash by ball drive.
 - ⦿ Maintenance free for long lasting, high reliability.
 - ⦿ Version with 360° phase re-engagement available.
 - ⦿ Model available only with plate wheel or other transmission component.
 - ⦿ Innovative calibration system by “H dimension” for an immediate calibration of the device.
 - ⦿ Possibility of combining a microswitch / proximity to stop the drive.
 - ⦿ Suitable for use in damp and oily environments.
- ON REQUEST
- ⦿ Complete with drive component or personalized plate wheel.
 - ⦿ Possibility of connections with locking assembly or other types of locking.
 - ⦿ Possibility of surface treatments for corrosion-specific needs.
 - ⦿ Personalized version with re-engagement in phase at 30°, 45°, 60°, 90°..

Safety coupling with the transmission of motion by means of hardened balls inserted directly in the drive element, obtaining a simple, compact and competitive device. The disengagement occurs quickly and safely allowing the stop of the transmission if the calibrated torque is exceeded.

	EDF/F: basic model for drive with platewheel or pulley, with parallel shafts	from 7,5 to 1450 Nm 55 mm max. bore	Page 19
	EDF/F/TAC: in-line shaft connection, simple and economic	from 7,5 to 1450 Nm 80 mm max. bore	Page 20

MAIN APPLICATION

- ⦿ Filling machines.
- ⦿ Metal chip conveyors.
- ⦿ Automatic conveyor belts.
- ⦿ Winches.

ADVANTAGES AND BENEFITS

- ⦿ Protects the product from damage or wrong positioning.
- ⦿ Protect the gear motor from accidental product collisions.
- ⦿ Protect the drive against bumps or limit.
- ⦿ Protects conveyor belts in case of product collisions.

ORDER EXAMPLE

● If the version EDF/F/TAC state both finished bores (on the limiter and pinion TAC).
Torque limiter available only with finished bore.

APPLICATION EXAMPLE

EDF/F - economic ball torque limiter: technical data

- Mounting of the drive organ within the device similar to the friction series.
- Automatic re-engagement after the restoration of transmission.
- Available with radial ring statically balanced
- Model with flange for custom links: EDF/F/F.
- Model available only with finished bore.
- Torque range from 7.5 to 1.450 Nm; max. bore $\varnothing 55$ mm.

Up to 12.000 Nm of torque and 120 mm bore

DSR

ComInTec[®]
Technology for Safety

DSR - rollers torque limiter: introduction

- ⦿ Precise torque setting by adjusting the radially balanced locking nut.
 - ⦿ Innovative calibration system by "H dimension" for an immediate calibration of the device.
 - ⦿ Equidistant re-engagement in phase or at 360°.
 - ⦿ Available with electromechanical switch / proximity for the transmission disconnection.
 - ⦿ Immediate intervention for an improved reaction compared to electronic systems.
 - ⦿ Maintenance-free for long lasting high reliability.
 - ⦿ Suitable for oily and wet environments.
- ON REQUEST
- ⦿ Complete with transmission gear, fully turned and mounted (plate wheel, pulley, gear pair).
 - ⦿ Possibility to use helical springs for low intervention torques.
 - ⦿ Connections with bore and keyway, locking assembly possible.
 - ⦿ Version with personalized re-engagement in phase 36°, 45°, 60°, 90°, 120°, ... possible.

Safety coupling with the transmission of motion through rollers that allow complete disengagement when the calibrated torque is reached permitting a quick stop of the transmission due to micro-EM1. Suitable for transmitting high torque with high reliability and compact size.

MAIN APPLICATIONS

- ⦿ Packaging and wrapping machines.
- ⦿ Labelling machines.
- ⦿ Bottling machines.
- ⦿ Conveyors.

ADVANTAGES AND BENEFITS

- ⦿ Protects the gearbox from jamming due to foreign matters.
- ⦿ Protects packages from squashing and deforming.
- ⦿ Protects the product handling elements from accumulations.
- ⦿ Maintains the timing between driver and driven after an overload.

	DSR: Basic model.	from 2,5 to 12000 Nm 120 mm max bore	Page 25
	... / FS: suitable for the mounting of simple transmission.	from 2,5 to 12000 Nm 120 mm max bore	Page 26
	... + GTR: connection with torsionally rigid coupling.	from 2,5 to 2800 Nm 90 mm max bore	Page 27
	... + GAS: connection with flexible coupling with high misalignments.	from 2,5 to 9600 Nm 129 mm max bore	Page 27
	... + GEC: connection with flexible coupling with reduced misalignment.	from 2,5 to 12000 Nm 180 mm max bore	Page 28

EXAMPLE OF ASSEMBLY

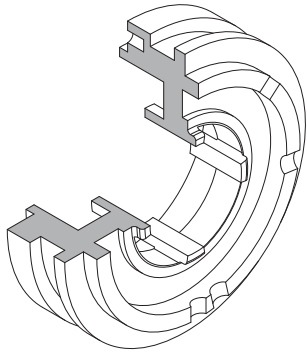

Model **DSR** (or **DSS**) with organ supported by a bearing
Transmission parallel shaft.

Model **DSR** (or **DSS**) with elastic coupling compact **GEC**
for transmissions to coaxial shafts.

DSR: Roller torque limiter for steady transmission with high torques and vibrations

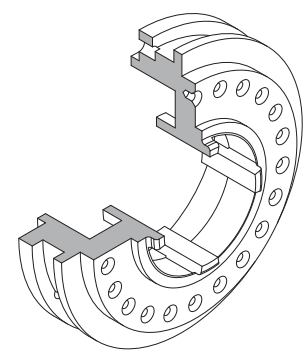

- Roller transmission.
- Equidistant automatic re-engagement.
- High torque settings at reduced dimensions.
- Same intervention torque in both directions.
- Torque range from 10 to 12.000 Nm; max. bore \varnothing 120 mm.

DSR/F: Roller phase torque limiter, synchronised connection between input and output.

- Roller transmission.
- Optimized roller arrangement (patented) with perfect stability and 3 point contact.
- Automatic re-engagement in phase 360° or personalized (30°, 45°, 60°, 90°, 120°, ...)
- High torque settings with compact dimensions.
- Torque range from 10 to 12000 Nm; max. bore \varnothing 120 mm.

The safety devices ComInTec with reengements in “phase” are characterized by a unique distribution of the rollers that represents the mathematically optimal solution to have a secure support balanced in all possible positions within 360°. When the limiter disengages, there are always at least three equally spaced rollers that rest on the rolling surface.

DSS: Ball torque limiter with optimum sensitivity in case of sudden torque variations (ON REQUEST)

- Ball transmission.
- High sensitivity and immediate intervention in case of minimal torque variation.
- Equidistant automatic re-engagement.
- Same intervention torque in both directions.
- Torque range from 2,5 to 2.050 Nm; max. bore \varnothing 68 mm.

NUMBER OF RE-ENGAGEMENTS IN 360 DEGREES

Model	Size							
	0.56	1.90	2.110	3.130	4.160	5.194	6.240	7.280
DSR	18	18	16	16	16	24	24	24
DSR/F	1	1	1	1	1	1	1	1
DSS	24	22	20	20	22	15	-	-

DSR - rollers torque limiter: versions

.../TAS: Torque limiter with stop pins

- Complete disconnection prevented.
- Minimum movement of the mobile base for an electrical signal to stop transmission.
- Roller or ball transmission.
- Torque range from 2,5 to 2.800 Nm; max. bore $\varnothing 68$ mm.
- Suitable for applications where the drive must not be disconnected.

The stop pins inserted in the central support as shown in the figure serve to limit the axial stroke of the device, preventing its complete disengagement and thus maintaining a stable transmission connection.

.../AM: Torque limiter with mechanical disconnection to maintain the timing between driver and driven

- Stop pin (patented) resists 4 times the maximum torque.
- 345° rotation allows the cancellation of the residual torque before the device stops.
- Maintains the timing and re-engages in the same position.
- High torque settings at reduced dimensions.
- Torque range from 10 to 2.800 Nm; max. bore $\varnothing 68$ mm.

To allow our engineers to select the correct direction "SX" or "DX" for your application, we require a drawing showing:

- how the unit will be mounted on to the shaft (orientation).
- the direction of rotation
- confirm which drive will continue to rotate after the overload,
- the shaft or plate wheel, pulley, etc.

.../SMO: Torque limiter with different disengagement torques from clockwise to anti-clockwise rotation.

- Different intervention torques in the two rotation directions (patented).
- Locking of one direction possible.
- Roller transmission with automatic re-engagement.
- Available with equidistant re-engagement or personalized angular phases.
- Torque range from 10 to 12.000 Nm; max. bore $\varnothing 120$ mm.

To allow our engineers to select the correct direction "SX" or "DX" for your application, we require a drawing showing:

- how the unit will be mounted on to the shaft (orientation).
- the direction of rotation.
- in which direction the high/low torque is required.

.../CM: minimum torque version

Helical springs execution, for a wider torque range and consequently a finer adjustment on calibration is possible

DSR - rollers torque limiter: technical data

- Basic model, connection with in-line shafts possible.
- The assembly with helical springs allows a higher sensitivity in torque setting: .../CM.
- Available with longer shaft for the assembly with transmission elements of large size : .../ML.
- Available with anti-corrosive surface treatments.
- Available with intervention signal ring.
- Torque range from 2,5 to 12.000 Nm; max. bore \varnothing 120 mm.

Model	
DSR	Roller torque limiter
DSR/F	Roller phase torque limiter
DSS	Ball torque limiter

Version

-	base version
.../ML	with long hub
.../FS	with supporting flange
.../CM	with helical springs
.../SMO	with one-way rotation
.../AM	with mechanical stop
.../TAS	with stops pin

Model	
GTR	Torsionally rigid disc coupling
GAS	Elastic jaw coupling
GEC	Compact elastic coupling

Locking type

See hub connection type list on page 4

BACKLASH FREE TORQUE LIMITER

(SAFETY COUPLINGS)

Up to 1.200 Nm of torque and 65 mm bore

DSS/SG

ComInTec[®]
Technology for Safety

DSS/SG - backlash free torque limiter: introduction

- ⊙ Exact torque regulation through a balanced radial nut.
 - ⊙ Innovative calibration system by “H dimension” for an immediate calibration of the device.
 - ⊙ Re-engagement in equidistant phase (DSS/SG) or 360° (DSS/F/SG).
 - ⊙ Maintenance free.
 - ⊙ Possibility to add a microswitch / proximity to stop the motor drive.
 - ⊙ Model available only with finished bore.
 - ⊙ Drive component assembled and directly supported by a ball bearing.
- ON REQUEST
- ⊙ Complete with transmission component worked and assembled (plate wheel, pulley, gear,...)
 - ⊙ Possibility of connection with 8 holes interchangeable with other products on the market.
 - ⊙ Possibility to have a connection flange to the most common intermittent drive units.
 - ⊙ Feasibility in personalized phase at 30°, 45°, 60°, 90°, ...

A ball safety coupling with high technology and precision. Provides backlash free transmission of motion with high sensitivity of reaction and an immediate release without peak load prior to release. The device can be adjusted by changing the pressure of the springs in the negative.

MAIN APPLICATIONS

- ⊙ Print machines and packaging machines.
- ⊙ CNC tool machines.
- ⊙ Index tables, filling machines, guiders.
- ⊙ Servomotors, slide guides.

ADVANTAGES AND BENEFITS

- ⊙ To protect the product against faulty positioning on the rotating table.
- ⊙ To protect the indexing against overloading along the transmission.
- ⊙ To protect the operating units of machine tools against impacts.
- ⊙ To protect slides or servomotors against impact or limit stops.

	.../P: base model for a high sensitivity in calibration.	from 4 to 1050 Nm 50 mm max. bore	Page 34
	.../N: immediate disengagement when exceeding the calibration torque; low residual torque after the disengagement.	from 0,8 to 1200 Nm 50 mm max. bore	Page 36
	... + GAS/CCE: connection by elastic coupling to accept high misalignments.	from 0,8 to 1200 Nm 62 mm max. bore	Page 38
	... + GAS/SG: connection by elastic coupling and single split clamp hub for a quick installation.	from 0,8 to 1200 Nm 60 mm max. bore	Page 39
	... + GSF: connection by bellows coupling for application with reduced inertia.	from 0,8 to 300 Nm 45 mm max. bore	Page 40

ON REQUEST STAINLESS STEEL VERSION “DSS/SG INOX” (NEWS)

- ⊙ Model without any backlash.
- ⊙ Same dimensions as the standard model, both in negative and positive versions.
- ⊙ Made in stainless steel at high resistance by suitable heat treatments.
- ⊙ High resistance to corrosion.
- ⊙ Suitable to food and/or pharmaceutical environments.
- ⊙ Torque range: 1,5 to 900 Nm; max. bore $\varnothing 65$ mm

ASSEMBLY EXAMPLES

.../P - POSITIVE version (progressive spring)

This allows for a simpler and more linear calibration. Moreover, during disengagement it creates an increase in the torque, caused by the compression of springs, which, on presence of a non-homogenous (but normal) transmission, can be useful to avoid frequent disengagements and machine stops.

As with the majority of ComInTec TORQUE LIMITERS, by turning the adjuster nut clockwise, the disengagement torque increases. On the contrary turning it counter-clockwise, you obtain a reduction of the torque.

.../N - NEGATIVE version (regressive spring)

It generates an immediate torque reduction, as soon as there is a minor overload, with consequent disengagement of the limiter and immediate stop of the drive. This characteristic is very useful on sensitive applications where even a slight increase of the loads can cause damage to the machine or to the machine product.

Adjustment of the Negative version is opposite to all other units in our range. Unlike the traditional units, by rotating the adjuster nut clockwise the disengagement torque will reduce, and therefore to increase the torque the nut must be rotated anti-clockwise. To assist the operator in setting, there are clear markings on the nut showing 75% of the max torque and +/- Min/Max directions indicated.

Unless otherwise requested, these models are supplied pre-calibrated at 75% of the maximum torque value of the spring's chosen configuration.

.../P - POSITIVE version with bore and keyway: technical data

- ⊙ Angular backlash free.
- ⊙ Maximum simplicity of calibration by standard method.
- ⊙ Wide regulation torque range.
- ⊙ Very fast response times.
- ⊙ Available with extended hub to assemble wide drive components: .../ML.
- ⊙ Torque ranges: 4 - 1050 Nm; max. bore: $\varnothing 65$ mm.

DSS/SG - backlash free torque limiter: additional information

OTHER COUPLING ON REQUEST

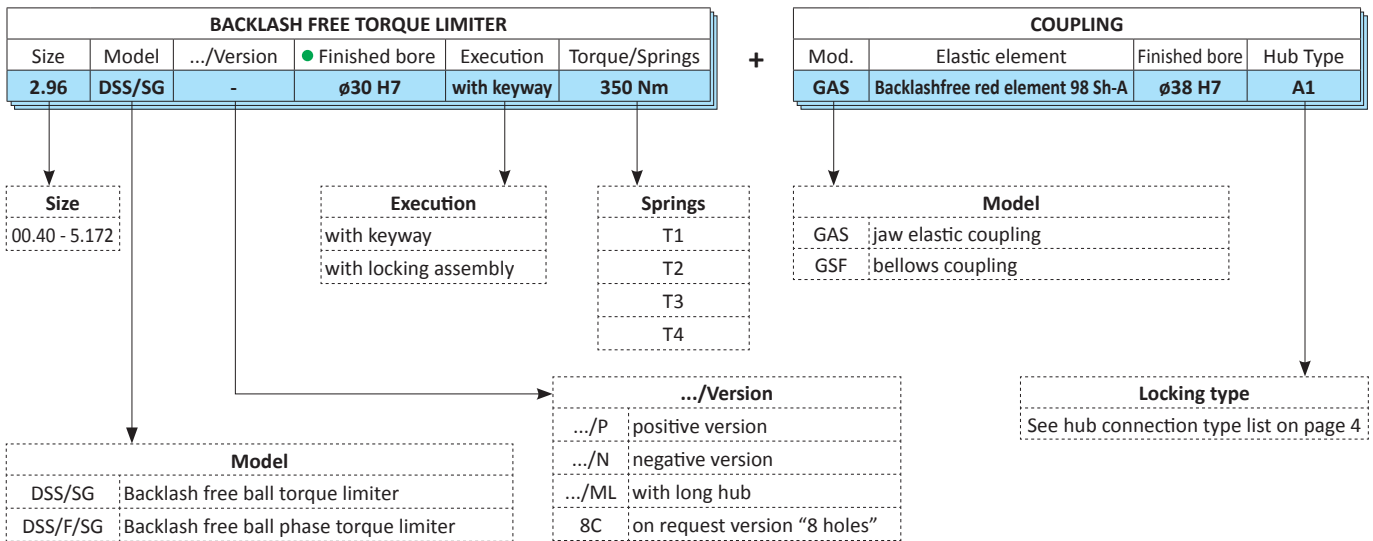

Model **DSS/SG** with double flexing torsionally rigid metal disc coupling **GTR/D** when torsional rigidity is required and ability to accommodate radial misalignment.

Model **DSS/SG** with single flexing disc coupling **GTR/S** for applications where torsional rigidity is required.

ORDER EXAMPLE

- Model available only with finished bore.

TORQUE LIMITER FREE ROTATION

(SAFETY COUPLINGS)

Up to 1.200 Nm of torque and 65 mm bore

DSS/SG/RF

ComInTec[®]
Technology for Safety

DSS/SG/RF - torque limiter free rotation: introduction

- ⊙ Absence of torsional play during the transmission of motion.
- ⊙ Fine-tuning the torque through a balanced radial ring.
- ⊙ Motion transmission through balls.
- ⊙ An innovative calibration system with "H dimension" for an immediate calibration of the equipment.
- ⊙ Manual re-engagement.
- ⊙ No residual torque after disengagement.
- ⊙ Possibility of combining a switch / proximity to stop the engine.

ON REQUEST

- ⊙ Complete transmission gear worked and fitted (crown, pulley, gear, ...).
- ⊙ Can be supplied with various types of rigid/elastic couplings for in-line shafts transmission.
- ⊙ Possibility of surface treatments for corrosion-specific needs.
- ⊙ Possibility of connection with 8 holes interchangeable with other products on the market.

A backlash free Safety coupling with free rotation and low residual torque suitable for high speed transmission. The disengagement is instantaneous once the torque is reached, the calibration is adjusted by changing the pressure of the springs. The re-engagement is manual, quick and reliable.

APPLICATIONS

- ⊙ Extruders.
- ⊙ Packing machines.
- ⊙ Automation technology.
- ⊙ Test benches.

ADVANTAGES AND BENEFITS

- ⊙ Protect the elements of a transmission even in case of high inertias.
- ⊙ Protect the product from shock or incorrect positioning.
- ⊙ Protect devices during transmission at high speeds of rotation.
- ⊙ Greater durability of all devices, thanks to the free rotation.

	.../DSS/SG/RF: version suitable for immediate release to overcome Torque calibration; low residual torque after disengagement.	from 10 to 1200 Nm 65 mm max bore	Pag. 46
	... + GAS/SG: connection with flexible coupling and locking clamp for quick installation.	from 10 to 1200 Nm 70 mm max bore	Pag. 48

ASSEMBLY EXAMPLES

OPERATION

This model of torque limiter negative version to incorporate the following features:

- ⦿ Backlash free with compact dimensions
- ⦿ Instantaneous reduction of the couple at the time of overloading
- ⦿ Absence of residual torque, after disengagement
- ⦿ Immediate response times and high sensitivity

Suitable for protecting against overloads within automatic machines with significant powers and inertias and high rotation speeds. When an overload occurs an immediate and complete separation of the drive and driven occurs and will remain disconnected in free rotation until it is re-engaged manually or using a suitable tool. A possible micro switch or sensor detects the movement of the movable base by generating an electrical signal necessary to stop the transmission. This electrical signal can also be used for further control functions. Electromechanical microswitches model EM1 or EM2 or inductive sensors model PRX, available from Comintec.

TORQUE ADJUSTMENT

Adjustment of the Negative version is opposite to all other units in our range. Unlike the traditional units, by rotating the adjuster nut clockwise the disengagement torque will reduce, and therefore to increase the torque the nut must be rotated anti-clockwise. To assist the operator in setting, there are clear markings on the nut showing 75% of the max torque and +/- Min/Max directions indicated.

Unless otherwise requested, these models are supplied pre-calibrated at 75% of the maximum torque value of the spring's chosen configuration.

HOW TO USE AND ASSEMBLE

The device is supplied ONLY with finished bore in the hub, unless otherwise specified, with tolerance H7 and keyway according to UNI 6604 (DIN 6885-1) with tolerance H9, H7 tolerance or without keyway with integrated locking assembly.

The device can be fixed axially by a screw and washer for the version with hole and keyway or by the locking device integrated in the version without key. They can be used, on request, also conical rings. The device is NOT self-supporting so it is necessary to provide that the shafts on which it will be fitted are with bearings and are supported in the case of the application are met with coupling misalignment shown in the catalog.

MAINTENANCE

These devices, mechanical, are maintenance-free.

In the case of the torque is appropriate to take account of different variables that combined together can affect the length of the limiter:

- Torque intervention in relation to the range provided by the limiter.
- Whether the frequency and duration of interventions.
- Ability to dissipate heat generated by the sliding.
- Speed of rotation.
- Environmental working conditions.

DSS/SG/RF - torque limiter free rotation: technical data

- ⊙ Simple manual re-engagement without special equipment.
- ⊙ Suitable to be installed in the kinematic chains with high inertia.
- ⊙ Available with extended hub for assembly of wide organs: ... / ML.
- ⊙ Organ mounted and directly supported by a ball bearing.
- ⊙ Model available only with finished bore (with keyway or with locking assembly).
- ⊙ Torque range: 25-1200 Nm; ø65 mm maximum bore.

OTHER COUPLING TYPES AVAILABLE ON REQUEST

Model **DSS/SG/RF** with backlash free jaw elastic coupling
GAS/SG/CCE with integrated locking assembly when is required
 to accomodate misalignment with high torsional rigidity.

Model **DSS/SG/RF** with single flexing disc coupling **GTR/S**,
 for applications where torsional rigidity is required.

ORDER EXAMPLE

● Model available only with finished bore.

MODULAR TORQUE LIMITER

(FREE ROTATION)

Up to 9.000 Nm of torque and 140 mm bore

DSM

ComInTec[®]
Technology for Safety

DSM - modular torque limiter (free rotation): introduction

- ⊙ Made in steel fully turned, with high mechanical strength.
 - ⊙ Free rotation after disengagement without residual torque.
 - ⊙ Reliable and maintenance free.
 - ⊙ Protected from external agents.
 - ⊙ Suitable for high rotation speeds and high inertias.
 - ⊙ Simple system of calibration and re-engagement.
 - ⊙ Compact and robust design.
- ON REQUEST
- ⊙ Overload signal ring (.../SI).
 - ⊙ Possibility of fitting with finished bore and keyway or locking assembly.
 - ⊙ Custom solutions for specific applications.
 - ⊙ Possibility of surface anticorrosive treatments for specific requirements.

A robust torque limiter with modular torque adjustment. Free rotation after overload permits high rotational speeds with also high torque settings and large shaft diameters can be accommodated.

The torque modules can be individually adjusted and re-engagement of the unit is quick and easy.

■ MAIN APPLICATION

- ⊙ Extruders and mills.
- ⊙ Mining industry and transporters.
- ⊙ Heavy industry.
- ⊙ Earthmoving machines and shredding/crushing machines.

■ ADVANTAGES AND BENEFITS

- ⊙ Product protection in case of overload.
- ⊙ Protection of operating units of machines in case of a collision.
- ⊙ Protection of the drive from external overloads.
- ⊙ Protecting conveyor belt stoppages.

	DSM: basic model for transmission to parallel shafts with plate wheel, gear or pulleys.	From 200 to 9000 Nm of torque 140 mm max. bore	Page 51
	... + GAS: coaxial connection with elastic coupling to absorb start-up torque and vibration.	From 200 to 9000 Nm of torque 140 mm max. bore	Page 52
	... + GTR: coaxial connection with torsionally rigid disc coupling for backlash free transmission.	From 200 to 9000 Nm of torque 140 mm max. bore	Page 52

■ APPLICATION EXAMPLE

DSM - modular torque limiter (free rotation): technical data

- Statically balanced with modules arranged symmetrically.
- Torsionally rigid.
- Module replacement without removing the device or other transmission components.
- Complete separation between the driven and driving part after disengagement.
- Integrated bearings for the support of the transmission.
- Torque range: 200 - 9.000 Nm; $\phi 140$ mm maximum bore.

MD - module of calibration: technical data

- Made in steel fully turned with high mechanical resistance.
- Ease of registration.
- Ease of manual re-engagement.
- Mounted on DSM devices for a torsionally rigid transmission.
- Disengaging with complete detachment between the driving and driven side.
- Available in two sizes.

DIMENSIONS

Size		A1	B1 h7	C1	D1	E1 h7	K1	M1	U1	V1
DSM	MD									
0	2	66	38	42	40	24	M5	65	5,5	3xM4
1										
2	3	87	50	56	54	30	M8	95	5,5	3xM4

CALIBRATION

The key elements of the DSM module consist of the central piston (p) that will drive a hardened ball (s) into the location seat (t). Torque adjustment can be made also whilst the module is fitted to the torque limiter by the rotation of the hexagonal adjuster nut (r). Make sure that during the adjustment the fixing screw (u) is fully unscrewed to allow free rotation of the adjuster nut. The units are supplied as standard with the minimum possible torque setting but by rotating the adjuster nut clockwise the torque value will increase, and the setting can be monitored by viewing the adjustment notches located on the circumference of the adjuster nut. A complete revolution of the adjuster nut will equal one pitch. It is important once setting is completed to tighten the locking screw (u) in order to lock the adjuster nut in place. For more detailed setting instructions please see the fitting and setting instructions sheets available.

Calibration of a module

RE-ENGAGEMENT

The re-engagement of the limiter is manual and should only be performed with the device at rest. Turn the fixed base (c) or the mobile base (d) so that the two reference marks are in line. At this point, insert the pins of the related modules with slight but firm pressure using a tool or rubber mallet.

DSM - modular torque limiters (free rotation) : additional information

OPERATION

This model of freely rotating limiter DSM has been specifically designed to protect against overload in heavy industry machines with significant powers and inertia and high speed of rotation.

The seals present protect from dust, dirt and prevent leakage of grease used within.

In nominal operating conditions the transmission torque is transferred from the driving to driven components by a different number of modules assembled symmetrically on an outer circumference of the device with the possibility of different configurations of springs inside them.

In case of overload, when the torque demand from the driven portion exceeds that of calibration, the balls will be forced out of the seat area and by doing so axially move the central pistons within the modules. This release occurs instantaneously separating the driver and driven sections allowing free rotation of the section still rotating until the transmission is stopped.

The device can also be equipped with a overload detection ring (DSM/SI), connected to the central pivots of the various modules, to be able to “read”, through an electromechanical switch (model ComInTec: EM1) or an inductive sensor (model ComInTec: PRX), the axial movement and send an electrical signal to trigger an alarm and stop the transmission.

The re-engagement of the individual modules must be done with the machine stopped as described in the previous section devoted to it.

HOW TO USE AND ASSEMBLE

The device comes complete with finished bore, unless otherwise noted, with tolerance H7 and keyway DIN6885-1 with H9 tolerance.

The fixing of the device can be made axially through the bore with a washer or on request an internal locking assembly.

The device is NOT self-supporting so it is necessary to provide ensure that the shaft on which the device will be mounted are supported with bearings and in the case of shaft to shaft connection the misalignment values detailed in the catalogue are noted.

MAINTENANCE

These devices, are maintenance-free.

In the case of the torque calibration it is important to take into account several variables that combined together can affect the duration of the limiter:

- ⦿ Torque value of intervention in relation to the actual range of the limiter.
- ⦿ The frequency and duration of interventions.
- ⦿ Ability to dissipate the heat generated by slippage or disengagement.
- ⦿ Speed of rotation.
- ⦿ Environmental conditions at work.

ORDER EXAMPLE

TORQUE LIMITER FOR GEARBOXES

(SAFETY COUPLINGS)

Up to 2.600 Nm of torque and 65 mm bore

.../PR

ComInTec[®]
Technology for Safety

.../PR - torque limiter for gearboxes: introduction

- ⊙ Safety coupling made in steel fully turned, spacer made in aluminium fully turned.
- ⊙ Standard treatment of phosphating on torque limiter.
- ⊙ Compact solution.
- ⊙ Model available for IEC motors and gearboxes.
- ⊙ Protection in both directions.
- ⊙ Instant disengagement upon overload.
- ⊙ Fast and simple calibration using our "H" dimension procedure.
- ON REQUEST
- ⊙ Device calibrated and ready to use.
- ⊙ Friction rings available in various materials and performance to suit specific needs.
- ⊙ Customized versions possible.
- ⊙ Various anti-corrosive surface treatments available.

Safety coupling to be mounted between the motor and gearbox with flanged B5 spacer. Available in sliding (DF/TAC/PR-V) and disengage versions (DSS/F/SG/PR-V). The location of the limiter between the motor and gearbox requires a smaller size of device with also reduces costs.

■ MAIN APPLICATION

- ⊙ Conveyor.
- ⊙ Packaging machines.
- ⊙ Wrapping machines.
- ⊙ Motorized systems of handling and positioning.

■ ADVANTAGES AND BENEFITS

- ⊙ Simplicity and sensitivity compared to gearbox integrated solutions.
- ⊙ Protect the motor-gearbox from accidental collisions or impacts from the products being processed.
- ⊙ Greatly reduces production downtime in case of overload.
- ⊙ Absorb static torques without disengaging (friction model).

	<p>DSS/F/SG/PR-V: Backlash free balls model to fit between motor and gearbox.</p>	<p>From 3 to 720 Nm of torque 48 mm max. bore / shaft</p>	<p>Page 57</p>
	<p>DF/TAC/PR-V: Friction model chain coupling version to fit between motor and gearbox.</p>	<p>From 1 to 1200 Nm of torque 55 mm max. bore / shaft</p>	<p>Page 58</p>
	<p>DF/PR: Friction model to assemble directly into the output of the hollow shaft gearbox.</p>	<p>From 1 to 2600 Nm of torque 65 mm max. bore 55 mm max. shaft</p>	<p>Page 59</p>

DSS/F/SG/PR-V - backlash free balls model for gearboxes (input shaft): technical data

- Balls solution, torsional backlash free in negative version, maintenance free.
- Instant disengagement between driving part and driven part in the event of overload.
- Available with single point (360°) engagement.
- Complete solution with connecting flanges in aluminum for IEC B5 motors.
- Inductive sensor integrated for monitoring the overload.
- Torque range: 2-720 Nm; bore/shaft max $\varnothing 48$ mm.

NOTES

- **Max speed***: for size 4.138 DSS/F/SG/PR-V if used with the springs set T4 the maximum speed is 1500 Rpm.
- **Weight***: the connection flanges for size 3.116 and 4.138 are in steel.

DF/TAC/PR-V - friction model with chain coupling for gearboxes (input shaft): technical data

- Compact and economic solution.
- Sliding of the driving part to overcome the torque calibration without disconnecting the transmission.
- Silent intervention and vibration-free.
- Complete solution with connecting flanges in aluminum for IEC B5 motors.
- Possibility of integration of an inductive sensor for monitoring the overload (DF/TAC/PR-V/S).
- Torque range: 1-1.200 Nm; bore/shaft max: $\varnothing 55$ mm.

DF/TAC/PR-V (without sensor) → spacer **type A** (with inspection)
 DF/TAC/PR-V (without sensor) → spacer **type B** (without inspection) ▲

DF/TAC/PR-V/S (with sensor) → spacer **type C** (with inspection)

NOTES

▲ On request

- D H7 *: reduced keyway on torque limiter.
- Weight refer to the torque limiter pilot bore.

DF/PR and DF/TAC/PR - friction model for gearboxes (output shaft): technical data

- Possibility of friction rings with different performance for specific needs.
- Specifically designed for installation on hollow output shaft gearboxes.
- Available complete with transmission component fully turned and fitted.
- Available with radial nut (.../GR) statically balanced.
- Model for gearboxes with a chain coupling, suitable for connections of coaxial shafts (DF/TAC/PR).
- Torque range: 1-2.600 Nm; max shaft: $\varnothing 55$ mm; max bore: $\varnothing 65$ mm.

			T4

- DF/TAC/PR-V model is supply combined with the corresponding spacer (type A or type B)
- DF/TAC/PR-V/S model is supply combined with the corresponding spacer (type C), complete with inductive proximity sensor (PRX).

PRX - inductive proximity sensor: technical data

- Standard version with brass cover with protection **IP67** DIN 40050.
- Electric contact 5 ÷ 24 VCC and working frequency 2000 Hz.
- Operating temperature from -20°C to +70°C.
- Output: NPN (N.O. - N.C.); PNP (N.O. - N.C.).
- Intervention distance: max 1 mm.
- Cable length: 2 meter (3x0,2).

Weight: 50g

AXIAL FORCE LIMITER

Up to 4.700 N of force and 20 mm shaft

DSA

ComInTec[®]
Technology for Safety

DSA - axial force limiter: introduction

- ⊙ Axially backlash free.
- ⊙ Protection in both tension and compression.
- ⊙ Free movement in tension and compression after release.
- ⊙ Automatic re-engagement in the exact position of disengagement.
- ⊙ Innovative calibration system by "H dimension" for an immediate calibration of the device.
- ⊙ Made of steel fully turned with special high mechanical strength.
- ⊙ No maintenance for high reliability in the time.

ON REQUEST

- ⊙ Complete with drive rods and rod ends.
- ⊙ Sensor or switch mounted in axial or radial position.
- ⊙ Possibility of customization for specific applications.
- ⊙ Possibility of surface treatments for corrosion-specific needs.

Safety coupling with linear limitation of force. Releasing both in compressive and tension once it reaches the calibration force. The setting force can be adjusted by turning the adjuster nut onto the springs and re-engagement is automatic. Possibility of connecting linear motion also very distant from each other.

■ MAIN APPLICATIONS

- ⊙ Shaft mounted gearboxes.
- ⊙ Cam/Eccentric movements.
- ⊙ Transactions structured for pushers and slides.
- ⊙ Crank mechanism.

■ ADVANTAGES AND BENEFITS

- ⊙ Protect shaft mounted gearboxes overloads on the transmission.
- ⊙ Protect slides or other moving parts from accidental shock or collision limit.
- ⊙ Protect movements typically jams or improperly placements.
- ⊙ Protect the final product from crushing or deformation.

■ ASSEMBLY EXAMPLES

DSA - axial force limiter: introduction

- High axial stiffness.
- Compact.
- Immediate interruption of power in case of overload.
- Continuous adjustment of the intervention force.
- Possibility of mechanical limit to prevent the slipping of the central pin after disengagement.
- Force range: 25-4.700 N.

PNEUMATIC CLUTCHES (SAFETY COUPLINGS)

Up to 30.000 Nm of torque and 120 mm bore

AP

ComInTec[®]
Technology for Safety

AP - pneumatic clutches: introduction

- ⊙ Simple and precise calibration.
 - ⊙ Transmission engagement / disengagement and torque limiter functions (safety coupling).
 - ⊙ Reliability and repetitiveness of the calibration torque.
 - ⊙ Torque variation whilst in motion, by pressure regulation.
 - ⊙ Free rotation after the disengagement through a complete disconnection between the parts.
 - ⊙ Low residual torque on disconnected parts.
 - ⊙ Models available only with finished bore.
- ON REQUEST
- ⊙ Complete with transmission element machined and assembled (plate wheel, pulley, gear, ...).
 - ⊙ Can be supplied with various types of rigid/elastic couplings for in-line shafts transmission.
 - ⊙ Possibility of shaft connection with finished bore, locking assembly or other systems.
 - ⊙ Available in anti-corrosive version, with specific surface treatments.

A friction clutch or roller with torque adjustment even during operation. Ability to disengage the drive and driven by pneumatic or electrical impulse. Low residual torque after disengagement. Calibration adjustable by changing the pressure (pneumatic) air supply.

APPLICATION FIELD

- ⊙ Machines with variable torque requirements.
- ⊙ Test benches.
- ⊙ Coiler and uncoilers.
- ⊙ Cut format systems.

ADVANTAGES AND BENEFITS

- ⊙ Engage/disengage different product transmission lines.
- ⊙ Maintain tension of wire/film coils.
- ⊙ Regulate different torques depending on the change of the format.
- ⊙ Protect the motor gearbox against every form of overload.

	DSR/F/AP: Complete engagement-disengagement of the transmission, also for long periods	from 7 to 30000 Nm 120 mm max bore	Page 67
	DSR/F/AP + GEC: compact coaxial connection for simple maintenance without being forced to remove the coupling	from 7 to 30000 Nm 180 mm max bore	Page 68
	DSF/TF/AP: friction motion transmission as tensioner.	from 3 to 875 Nm 65 mm max bore	Page 69
	DSF/TF/AP/TAC: simple and economic coaxial shaft connection.	from 3 to 875 Nm 80 mm max bore	Page 70

ASSEMBLY EXAMPLES

NOTES

- Avoid rigid locking of the anti-rotating pin of the cylinder as it can cause imbalances during rotation

DSR/F/AP - roller phase pneumatic clutch: technical data

- Transmission through rollers with re-engagement in phase 360° (equidistant on request, 30°, 45°, ...).
- Free rotation for long periods after overload: ... / CS.
- Suitable for high rotation speeds.
- Maintenance free for high reliability.
- Arranged to add a microswitch / proximity to stop the motor drive.
- Torque range: 5 – 30.000 Nm; max. bore $\varnothing 120$ mm.

OTHER COUPLING MODELS ON REQUEST

Model **DSR/F/AP** with single flexing disc coupling **GTR-S**, for applications where torsional rigidity is required and without the ability to accommodate radial misalignment.

Model **DSR/F/AP** with double flexing torsionally rigid metal disc coupling **GTR-D**, when torsional rigidity is required and ability to accommodate radial misalignment.

NOTES

▲ On request

- These details refer only for the coupling (GEC); for connection details see on page 67.
- Weights are relevant only to the pilot bore (GEC).
- Microswitches EM1 or EM2 and inductive sensor PRX see page 73

DSF/TF/AP - friction pneumatic clutch: technical data

- ⊙ Friction torque transmission.
- ⊙ As tensioner, brake and torque limiter (safety coupling).
- ⊙ Constant adjustment of the calibration torque.
- ⊙ Available with special friction rings for specific requirements.
- ⊙ Available in version to stop the transmission after an overload: .../SI.
- ⊙ Torque range: 3 – 875 Nm; max. bore \varnothing 65 mm.

OTHER COUPLING MODELS

Model **DSF/TF/AP** with elastic jaw coupling **GAS** to accommodate high misalignments.

Model **DSF/TF/AP** with compact elastic coupling **GEC** for simple maintenance without removing the coupling.

NOTES

- Data is relevant to the whole assembly (DSF/TF/AP/TAC).
- Weights are relevant only to the pilot bore (DSF/TF/AP/TAC).

AP - pneumatic clutch: versions on request

DSR/F/AP/CS

Version with ball bearings as an alternative to the rollers. Suitable for long rotation on disengagement.

.../PRX

Version with proximity inductive sensor PRX M8x1, integrated into the DSR/F/AP. Compact and versatile solution, without adding equipment and/or external components.

DSF/TF/AP/SI

Friction clutch with intervention signal and further automatic re-engagement. This characteristic requires particular machining on the drive element, which has to be supplied together with the torque limiter.

AP - pneumatic clutch: additional information

EXAMPLE CIRCUIT CONNECTION TYRE

The pneumatic clutch are designed for the connection of pneumatic circuit with connection type "GAS".
Some examples for the control to the pressure are shown here:

- A) Adjustable pressure with pressure regulator.
- B) Control of two pressures using solenoid valves.
- C) Control of variable pressure by PLC.

AP - pneumatic clutch: additional information

ORDER EXAMPLE

- Both models available only with finished bores.

EM - electromechanical switch: technical data

- Protection level IP57 DIN 40050.
- Adjustment of the lever end position possible.
- Die-cast aluminium box.
- Operation temperature range from -10°C to +85°C.
- Three different options of voltage input with 1 or 2 contacts available.
- Initial stroke 0,7 mm, Extra stroke: 4 ÷ 8 mm depending on setting (possible in a range of 6 mm).

PRX - inductive proximity sensor: technical data

- Standard version: Brass cover with protection level IP67 DIN 40050.
- Electric contact: 5 ÷ 24 VdC. - Frequency: 2000 Hz.
- Output: NPN (N.O.-N.C.) – PNP (N.O.-N.C.).
- Operating distance: max 1 mm.
- Cable length: 2 m (3x0,2).

TORQUE LIMITERS (SAFETY COUPLINGS) - CLUTCHES: additional information

CALIBRATION SYSTEM WITH "H" DIMENSION

The transmitted force of a torque limiter can be determined with one or more axial springs and different forces, depending on how they are combined. Efficient controls on all components make it possible to realize tables for simple, easy and most of all, quick torque limiter calibration, without any need of special equipment.

Search in the technical catalogues, in the table "torque calibration" the value that is closest to the required torque of the selected torque limiter size and spring combination. Find the related value of "dimension H". Alter the spring pressure by adjusting the ring nut until you reach "dimension H", the distance between nut ring and flange (see drawings). Finally, fix the nut ring by its locking mechanism. With this calibration system you obtain:

- ⦿ Torque calibration without removing the torque limiter.
- ⦿ Quick torque calibration.
- ⦿ Avoid calculating and reading errors due to misinterpretation of drawings.
- ⦿ Simple variation or reset of the torque.

EXAMPLES OF DETERMINING, REGULATING AND CALIBRATING A TORQUE LIMITER

Electric motor: power = 7,5 Kw
Rpm = 1450
f (safety factor) = 1,5

Use the following formula to get an idea of the intervention torque:

$$C = \frac{Kw \cdot f \cdot 9550}{Rpm} = \frac{7,5 \cdot 1,5 \cdot 9550}{1450} = 74 \text{ Nm}$$

Find in the technical catalogue (in this case DF) the required spring combination and the relative dimension H for the selected torque limiter (in this case 2.90 DF), to have the desired torque (in this case springset T0 - dimension H 12,2 mm - torque 74Nm).

Please note: Due to the expansion coefficient and the load loss of all springs in general, the "dimension H" can vary slightly.

Torque range
Spring configuration

Torque limiter size

Measure dimension "H"

15,8				415
16,2				353
16,6				276
17				185

➡ You can find all the calibration torque values by typing in "dimension H" on our website "www.comintec.it".

LABEL

The Company ComInTec uses a plastic label with indelibly printed information necessary to identify all product groups and production history. This information is also useful to order spare parts, repeat orders and to get product information.
Explanation of the data:

Example:

Example:

MARKING

ComInTec® CERTIFICATIONS

- UNI EN ISO 9001:2008 certified company since February 1996

- Internal and external environment protection complying with directive, **2002/95/CE (RoHS)**, that forbids the use of harmful substances during the production process or in the endproduct, and complying with D.Lgs. 626/94 for security and health at work.

- Company and production "Made in Italy".

- Maximum attention to market requests for conformity with 94/9/CE (ATEX) for use in potentially explosive environments.

ABS Certification for the use in the Naval industry.

- European Power Transmission Distributors Association (EPTDA). The largest organisation of distributors and manufacturers of power transmission and motion control products in Europe.

- Continuous product-research and development, some of them with Italian and European **PATENT**.

- REACH compliance (CE) n. 1907/2006

ASK FOR A PROJECT

Your needs are our priorities.

If you need help for a product design, contact ComInTec experts for assistance and advice. It helps to fill in this form. Your request will be handled in the shortest time possible.

Signature

PLEASE ALSO SEND, IF AVAILABLE, A DRAWING OR PHOTOGRAPH. IT CAN ASSIST US ENORMOUSLY IN HELPING US TO FULLY UNDERSTAND YOUR APPLICATION.

NOTES: on all groups is not always guaranteed the respect of the phase between the keyway and the connection holes.
In general for fixing screws/bolts supplied by ComInTec please observe the data provided in the catalogues or instruction sheets respect correct tightening torques, for those not supplied (or not indicated) please respect the general mechanical data available based on the grades used.

ComInTec Srl reserves the right to discontinue the production of any model and / or change specifications or dimensions at any time without notice and without obligations.
The data reported in this catalog are indicative and not binding.
The torque values listed in the catalog refer to static tests performed under “normal condition”.
These values may be subject to change, depending on the parameters of work and environmental conditions.

This catalogue supersedes all previous.
